

maxE plus accu-battery

ANSMANN maxE plus accu-battery

The ANSMANN maxE plus accu-battery merges the benefits of NiMH rechargeable batteries and disposable batteries in one cell:

- > Up to 1000 times rechargeable
- > Very low self discharge
- > Ready to use right away (cell is pre-charged)
- > High current output
- > Cost-effective and environmentally friendly
- > No special charger needed
- > Perfect for nearly all applications

The capacity of this new generation of accu-batteries has been increased significantly. So far Mignon-size accu-batteries could offer a maximum capacity of 2100mAh only. The brand new maxE plus cell now comes up with 2500mAh and therefore features an almost 20% increased utilisation time of your applications.
